

OTIS ELEVATOR ENTRANCE

DESIGN **E-100**

OTIS ELEVATOR ENTRANCE

TYPICAL HOISTWAY VIEW CENTER-OPENING DOORS

FURNISHED COMPLETE

Otis elevator entrances are complete installations consisting of flush hollow-metal doors, unit frame, cast anti-slip sill, hanger cover, fascia plate or toe guard, header, and structural support angles.

FEATURES SIMPLICITY OF FORM

The outstanding feature of Otis entrance design E-100 is its simplicity which is achieved by using but one form, a convex curve, for side and head jambs. Since the side jambs have no sharp corners, they are less subject to damage from blows than side jambs of angular profile.

DURABLE LONG-WEARING FINISH

Doors and frame are constructed of heavy gauge metal and finished in baked enamel. The baked enamel finish is easy to clean, resistant to scratching, and lustrous throughout its life. There are sixty colors to choose from. Where mixed color combinations are desired, a door color may be chosen to harmonize or contrast with the frame color.

Door panels with striping, monograms, or other special decorative effects to meet individual requirements can be supplied if desired. Also, door panels and frame can be supplied in nickel silver, yellow bronze, or stainless steel with a natural metal finish protected by a clear lacquer coating.

DESIGN E-100

UNIT FRAME SIMPLIFIES INSTALLATION

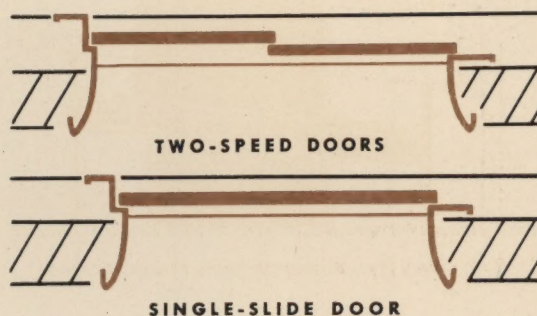

The "unit" frame supplied with this entrance is a one-piece assembly that can be set in place without dismantling. It is equipped with adjustable anchors for bonding into the wall. This eliminates handling and assembly of loose parts and facilitates construction and finishing of hoistways.

SOUND DEADENED FOR QUIETNESS

To insure quiet operation and screen hoistway noises, the doors and frames of Otis elevator entrances are sound deadened.

DOOR ARRANGEMENTS

This design is suitable for use with single-slide, two-speed, or center-opening doors.
